

A. Without disassembling the bracket, install upper back plate of bracket on pole with banding straps and buckles, making certain the top of the bracket reads up as shown on the face of the bracket. Tighten banding and insert rod. Secure rod to bracket with "D" clip & tighten 4 nuts with faceplate in lowest position.

B. Determine lower bracket position (according to banner length) and install bottom bracket (without Disassembly) with "up if bottom" reading up as indicated. Faceplate should be in highest position on back plate. Insert rod to bracket with "D" clip. Secure banding but leave nuts on faceplate loose to tighten after banner is taut between upper and lower brackets.

C. Slide upper and lower sleeves of banner onto fiberglass rods, and secure banner to bracket with cable ties.

D. Adjust bottom bracket downward until banner is taut on inner edge of banner and tighten 4 nuts to final position.

CLEANING = Clean banners with either clear water or water with a small amount of soap (NOT DETERGENT). Thoroughly rinse and dry before storing.
